THE GROUND IS THE LIMIT!

GROUND LOCK

(Patent Number 6,997,724)

The *Ground Lock* is an aircraft security device designed to prevent unauthorized use of aircraft by isolating the main aircraft battery from the electrical system. The lock components are custom manufactured by Medeco® a leader in the high security lock industry, encapsulated in a Delrin™ insulator. The result is a no-compromise aircraft security solution.

The *Ground Lock* complies with the United States Transportation Security Administrations “Security Guidelines for General Aviation Airports” Information Publication A-001.

The *Ground Lock* is approved by the New Jersey Department of Transportation as one part of the state required “two-lock system”.
